

Majesty Palm

Scientific name : *Ravenea rivularis* Jum. & H.Perrier

English name : Majesty Palm

Family : Arecaceae

Native Distribution : Invasive species

Origin : Central river valley area of Madagascar.

Growth habits : Deciduous tree

Leaf : Feather-shaped compound leaves, linear-shaped leaflets, long and wide leaf blades, dense and lush, emerald green foliage.

Flower : Flowerless

Fruit : Small and red

Tree characteristics : It can grow up to 25 meters in height. The stem has circular leaf scars.

Ecology : Its beautiful tree shape and highly flexible trunk make it resistant to breaking and losing small leaves in strong winds, making it particularly suitable for use as street trees in coastal areas. It can also be used as an indoor potted plant for decoration.
